DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-26, drawn to a method, computer system, data storage device, or apparatus for designing a multi-epitope construct via epitope pairs, and a combination of amino acid insertions; classified in class 702, subclass 27.
- II. Claims 27-37, drawn to a method for designing a multi-epitope construct comprising CTL epitope nucleic acids which are sorted with the introduction of flanking amino acid residues, classified in class 702, subclass 27.
- III. Claims 38 and 39, drawn to multi-epitope constructs, classified in class 530, subclass 350.
- IV. Claims 40-46, drawn to multi-epitope nucleic acid CTL constructs, classified in class 536, subclass 23.1.
- V. Claims 47-54, drawn to multi-epitope nucleic acid HTL constructs, classified in class 536, subclass 23.1.
- VI. Claims 55-57, drawn to multi-epitope nucleic acid HLA constructs, classified in class 536, subclass 23.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the various Groups are directed to different modes of design in that Group I inserts amino acids whereas Group II is directed to flanking amino acid alterations.

Inventions of Groups (I and II) and Groups (III – VI) are related as processes of making and products made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the products of Groups III – VI are either proteins or nucleic acids which may be alternatively made either by combinatorial screening or direct chemical syntheses as alternatives to the methods etc. of Groups I or II.

The inventions of Groups III - VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions Groups III - VI are directed to different epitope contents as clearly set forth in the summaries of these Groups above.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1631

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
